

Covinax 370-00

PRODUCT DESCRIPTION

Covinax 370-00 is a pressure sensitive vinyl acrylic copolymer stabilized with a cellulosic colloid. This polymer exhibits very aggressive tack after drying. The cellulosic colloid imparts a thixotropic rheology to the wet polymer and improves the water resistance of the dry film. Covinax 370-00 is used in window gums, for laminating or bonding Mylar, cellophane, printed or lacquered board and polyethylene. Adhesion to Mylar and cellophane is excellent; to polyethylene, is fair, and to polypropylene, is fair.

PHYSICAL PROPERTIES

Polymer Type:	Vinyl Acrylic	Freeze/Thaw Stability:	Unstable
Protective System:	Cellulosic	Weight Per Gallon:	8.6 lbs
Viscosity (cps):	500 – 5000 (LVF, Spindle #4/60 RPM/77° F)	Borax Compatible:	Yes
Percent Solids:	52% - 55%	Color:	White
pH:	4.0 – 5.0		

ADDITIONAL INFORMATION

Covinax 370-00 is designed to be used as supplied. It can be diluted with water if necessary

Covinax 370-00 conforms compositionally with FDA Regulation 21 CFR 175.105.

The data provided in this Technical Data Sheet represents typical physical and/or performance values for the product under a given set of testing conditions. The ranges or values are not specifications. Specifications will be set based on statistical analysis of measurements made by the quality control laboratory on production material and will accurately reflect production capabilities. This data should be used as a guide for product selection only.
